

Mining valuable information out of a large and complex SAP databases is frequently a long and tedious task taking weeks or months of hard work by internal auditors. This is not something an organisation can afford to do often and more often than not, it results in late or inaccurate financial statements. Understanding the importance of continuous monitoring, Prodigy Data Solution Pte Ltd consulting team has designed a flexible, scalable automated Solution Suite to ensure you see fast results and gain increased confidence in the corporate data underlying your financial reporting.

Branded as the **“Continuous Monitoring Solution Suite”**, this solution suite consists of standard applications that are ready to implement to your existing analysis and reporting. The Continuous Monitoring Solution Suite focuses on three key areas – **(1) Trends Analysis, (2) Control & Compliance, and (3) Fraud Prevention**. The objective of this solution suite is to ensure essential *controls compliance* and audit tests through *continuous monitoring* and at the same time, free your valuable staff resources to focus on critical analysis and investigation, and to resolving potential weaknesses or deficiencies in internal controls and core business processes. These suites can be repeated any time on a scheduled basis on the latest database contents with no personal assistance.

Specially developed for SAP users, Prodigy’s Continuous Monitoring Solution Suite consists of various modules covering business cycles such as:

- Procurement to Payment
- Sales Analysis
- Order to Cash
- General Ledger
- Compliance

This Continuous Solution suite for SAP provides over 35 tests and 200 reports for users to select from. Customer can decide to implement the full suite or selected module. Through the efficiencies provided, SAP users no longer have to spend long hours on internal audits and more importantly, be able to identify control breaches on a more timely basis, allowing for early error correction, fraud detection, and remediation of the controls. Consequently, it helps to maximise control effectiveness and minimise risks and losses.

List of Reports available for SAP Modules:

- **Vendor Turnover and Spending Profile**
